

## Survey Reveals High Number of Sexually Active Women Who Use No Birth Control Method, Supporting the Continued Need for Non-Hormonal Birth Control Innovations such as Evofem Biosciences' Product Candidate Amphora®

SAN DIEGO, Sept. 26, 2018 /PRNewswire/ -- Evofem Biosciences, Inc., (NASDAQ: EVFM) ("Evofem" or the "Company"), a clinical-stage biopharmaceutical company committed to developing and commercializing innovative products to address unmet needs in women's sexual and reproductive health, today announced detailed results of its commissioned Consumer Survey conducted by The Harris Poll, which aligns with previously published data by the Guttmacher Institute<sup>1-3</sup> and supports the following statistics:

- 24 million<sup>1</sup> (55%) sexually active American women at risk for pregnancy currently use no birth control method, yet these women have an 85% risk of becoming pregnant within one year<sup>2</sup>
- Of those American women who use birth control, about 8 million<sup>1</sup> (36%) would prefer non-hormonal birth control
- 67% of American women do not use condoms, for the prevention of pregnancy and sexually transmitted infections (STIs)<sup>3</sup>, such as chlamydia and gonorrhea

On World Contraception Day, these U.S. statistics support the continued need for new woman-controlled, non-hormonal birth control innovations like Amphora. Ideally such methods would protect against pregnancy and also have other preventive indications (such as STI prevention), thus giving women better control over their sexual and reproductive health.

"The results of this survey substantiate the need for a non-hormonal, woman-controlled, 'only when she needs it' birth control method such as Amphora that would, if approved, potentially benefit the millions of women who do not wish to become pregnant but do not or cannot use hormones and currently use no form of birth control," said Sandra Pelletier, Evofem Biosciences' Chief Executive Officer. "I am especially proud to share these results on

World Contraception Day, as its mission aligns with ours with regard to improving awareness of birth control methods and enabling women to make informed choices about their sexual and reproductive health."

Amphora is an investigational first-in-class Multipurpose Vaginal pH Regulator (MVP-R) designed to give a woman authority over some of the most intimate issues of her life and health. This non-hormonal, non-systemic vaginal gel is being developed for on-demand birth control as well as prevention of chlamydia and gonorrhea.

"These statistics should be a call to action for women to gather together on important issues related to sexual and reproductive health. The fact that over 50% of sexually active American women at risk for pregnancy use no birth control clearly demonstrates the continued need for innovations in birth control methods including non-hormonal birth control such as Evofem's Amphora," said Mary Jane Minkin, M.D., Clinical Professor of Obstetrics, Gynecology and Reproductive Sciences at Yale University School of Medicine. "On World Contraception Day, I am proud that Evofem is committed to revolutionizing women's health through the development of Amphora and education on safe and effective tools for birth control."

Evofem expects to report top-line data by year-end 2018 from its second Phase 3 clinical trial of Amphora® (L-lactic acid, citric acid, and potassium bitartrate) for the prevention of pregnancy. Assuming positive results, the Company plans to re-submit the Amphora New Drug Application (NDA) in the second quarter of 2019. If approved by the FDA, Evofem will commercialize Amphora in early 2020 as the first and only hormone-free, woman-controlled, on-demand MVP-R for birth control.

## About Evofem Biosciences

Evofem Biosciences, Inc. (NASDAQ: EVFM) is a clinical-stage biopharmaceutical company committed to developing and commercializing innovative products to address unmet needs in women's sexual and reproductive health. Evofem's pipeline includes two proprietary Multipurpose Vaginal pH Regulator (MVP-R) product candidates. The Company expects to report top-line Phase 3 data on its lead MVP-R drug candidate, Amphora®, for prevention of pregnancy by year-end 2018.
